

Adolfo Zambrana

I am a dynamic, driven and self-taught person who seeks to find new personal and professional challenges in each project that I undertake. Each project also supports my professional development and I am enjoying enhancing my skill sets within the programming and graphic design fields.

Most of my experience is with technologies such as; Next, React, Tailwind, TypeScript, SASS and Web3 tools. I also have experience in prototyping applications and UX/UI design. In backend I worked with Node, MongoDB, Render or Postman.

In the field of visual design, I have experience in working with the complete spectrum of Adobe programmes and the Figma design program. I am also confident in working with Agile Scrum work methodologies.
